Description

This volume puts together the works of a group of distinguished scholars and active researchers in the field of media and communication studies to reflect upon the past, present, and future of new media research. The chapters examine the implications of new media technologies on everyday life, existing social institutions, and the society at large at various levels of analysis. Macro-level analyses of changing techno-social formation – such as discussions of the rise of surveillance society and the "fifth estate" – are combined with studies on concrete and specific new media phenomena, such as the rise of Pro-Am collaboration and "fan labor" online. In the process, prominent concepts in the field of new media studies, such as social capital, displacement, and convergence, are critically examined, while new theoretical perspectives are proposed and explicated. Reflecting the inter-disciplinary nature of the field of new media studies and communication research in general, the chapters interrogate into the problematic through a range of theoretical and methodological approaches. The book should offer students and researchers who are interested in the social impact of new media both critical reviews of the existing literature and inspirations for developing new research questions.

Table of Contents

Preface Ronald E. Rice **1. Introduction: Challenges for New Media Research** Francis L. F. Lee, Louis Leung, Jack Linchuan Qiu and Donna S. C. Chu **Part I: Techno-Social Formations** **2. About the Series

Routledge Research in Information Technology and Society (/series/SE0448)

The planet is being transformed by technical change and in particular by the speed of development in information technology. This series brings together the latest research on the social impact of IT and seeks to provide a broad range of case studies and comparative analysis of this phenomena and how it is changing our lives.
